

# Instructions

## Correct attachment Bottleholder

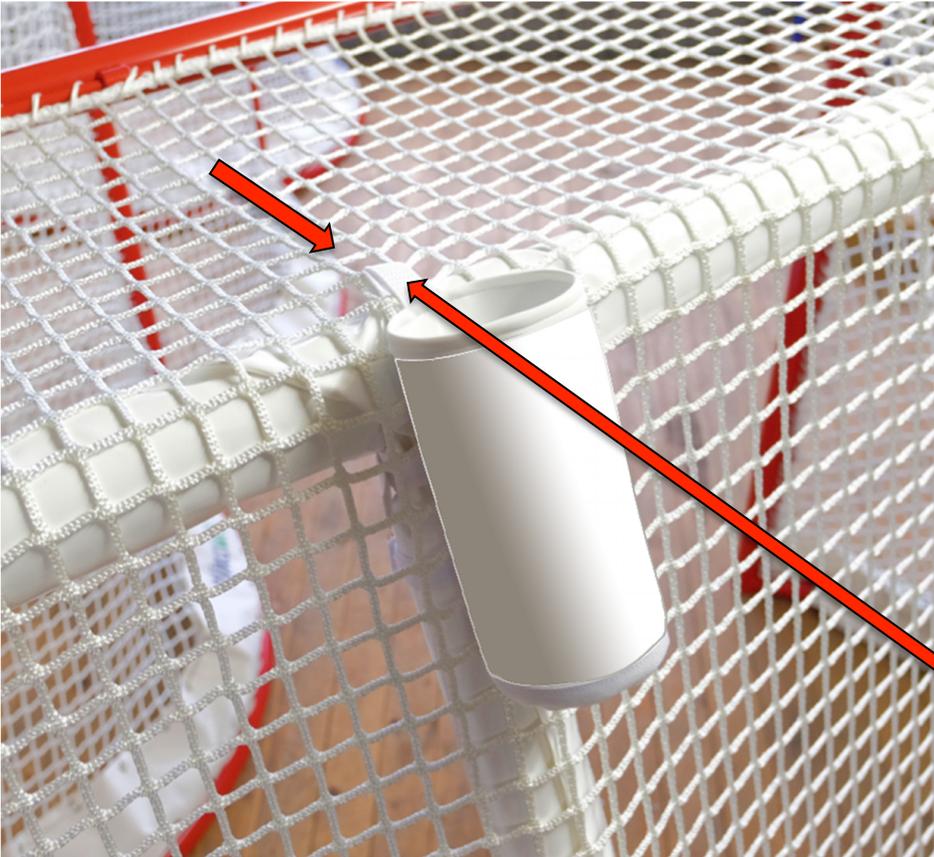

(Model: Bottleholder 1.0, Bottleholder 2.0 Pro Light & Bottleholder 3.0 Pro+)

# Attachment of the upper Velcro

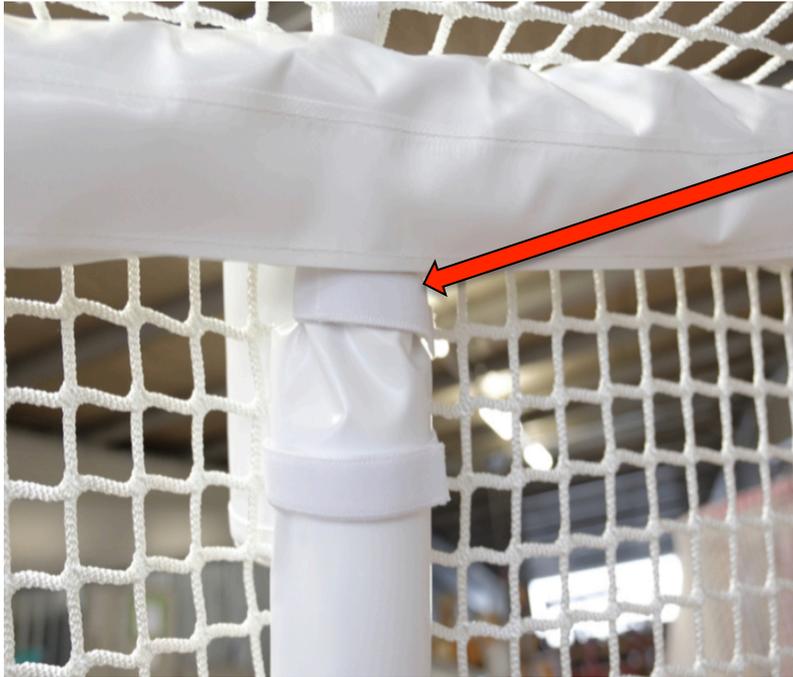

The upper Velcro fastener is the most **important** of the Bottleholder.

It is therefore important to note the following points:

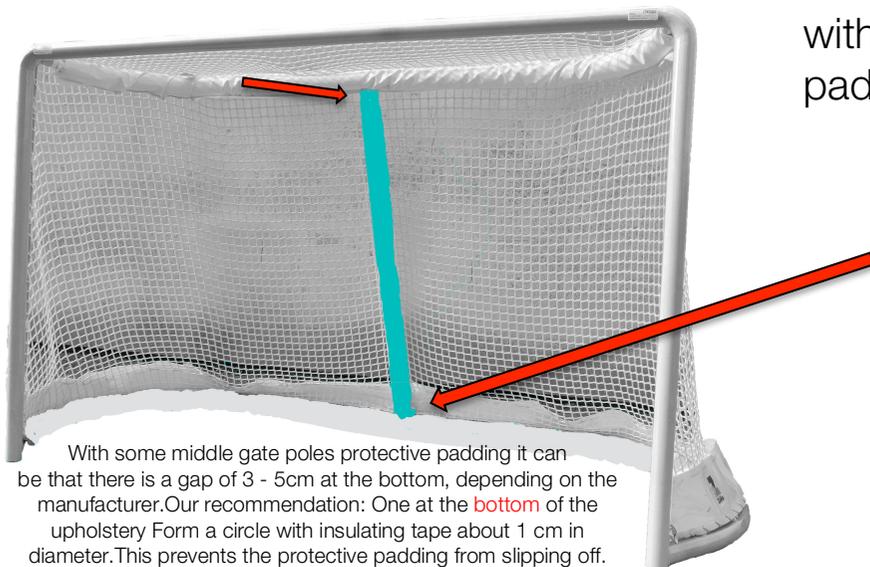

1. The upper Velcro fastener bears the entire weight of the sports bottle and supports the bottle holder so that it cannot tip over.
2. The upper Velcro fastener must **not** be attached below the goal frame or too loosely on the net! If the fastening is incorrect or too loose, the upper Velcro fastener and the fabric center band with the Velcro fasteners can be damaged.
3. The Velcro fastener must be closed tightly in three to four square stitches as shown (see illustration).

# Attachment to the middle goal post

1. In addition, the Velcro fasteners **must** be attached to the protective padding and to the gate pole.
2. Otherwise the Velcro fasteners have too much play and attachment is not guaranteed. It also means that the bottle holder can tip over and the straps where the Velcro fasteners are sewn on can be damaged and torn out!
3. It must also be ensured that the protective padding of the middle gate post is flush with the upper gate post as shown. If you have a problem that the protective upholstery slips down after a while, it is advisable to stick insulating tape underneath the protective upholstery at the unprotected area at the **bottom** of the central gate until a ring with a diameter of about 1 cm is formed. This prevents the protective padding from sliding down any further.

With some middle gate poles protective padding it can be that there is a gap of 3 - 5cm at the bottom, depending on the manufacturer. Our recommendation: One at the **bottom** of the upholstery Form a circle with insulating tape about 1 cm in diameter. This prevents the protective padding from slipping off.

# General

1. Our past experience has shown that our bottle cages last for 4-6 months without any problems (**no guarantee or warranty**)! This **and only** if the bottle holder is properly attached. Correct use and attachment of the bottle cage means that it wears out less quickly and you will enjoy our product for longer.
2. If the correct instructions for use are followed, the Velcro fasteners attached to the back will not tear off. In the event of improper attachment and use, Safe the Bottle rejects any liability. (**We generally do not give a lifetime or other guarantee on our products**). You can find the video on correct fastening at: [www.bottleholder.ch](http://www.bottleholder.ch)
3. The bottle holder is sewn entirely by hand. We only use high-quality products and rely on the highest quality in production and processing. All seams are double or even triple reinforced, and durability is guaranteed through the use of hard-wearing polyester and star thread. The 3-point fastening is an internationally registered and protected design and may not be adapted or copied by **anyone**!
4. We are always there for you! Do you need a replacement PVC-U pipe or a small repair? Have you noticed any errors or deficiencies in the product or do you have general questions? Please contact the manufacturer Safe the Bottle directly at **+41 79 426 51 54**. Together we will find the right solution for you!
